MuleSoft Developer- JD

We are looking for a MuleSoft Developer with 2+ years of hands-on experience in building scalable, secure integrations using the MuleSoft Anypoint Platform. The ideal candidate will have strong knowledge of API-led connectivity, with experience in integrating cloud and on-prem systems. Salesforce experience is a plus, but not mandatory.

Key Responsibilities

- Design, build, and manage APIs and integration flows using MuleSoft (Anypoint Studio, CloudHub, API Manager).
- Implement API-led connectivity between internal systems, databases (MySQL, SQL Server, Oracle, BigQuery), and cloud platforms.
- Develop reusable APIs and connectors, and manage API lifecycle.
- Handle integration with on-prem systems using VPNs and secure protocols.
- Work with file formats such as Parquet and systems like MINIO.
- Perform unit testing, debugging, and performance tuning of MuleSoft applications.
- Collaborate with cross-functional teams, ensuring smooth data flow and solution scalability.

Must-Have Skills

- 2–4 years of MuleSoft development experience.
- Strong knowledge of REST, SOAP, and Bulk APIs.
- Experience with DataWeave, RAML, and API security standards.
- Integration experience with databases and third-party systems.
- Familiarity with CI/CD pipelines, Git, and Agile methodologies.
- Strong problem-solving and communication skills.
-

Nice to Have

- Experience with Salesforce (Data Cloud, Marketing Cloud, or Core).
- MuleSoft Certification (Level 1).
- Exposure to cloud environments (AWS, GCP, Azure).
- Understanding of OAuth, JWT, and OpenID Connect protocols.
